Goal

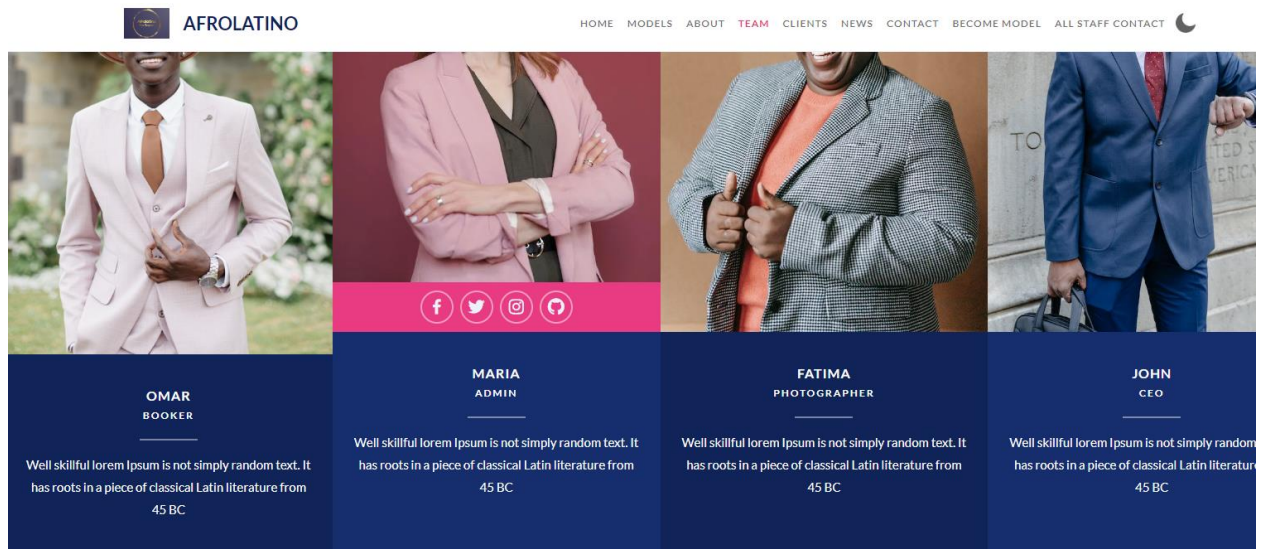

To execute the layout of the site using HTML, CSS and Bootstrap. The website for a modeling agency. Whose plan is to exponentially increase their reach, while working for you 24/7, virtually for free. The website will increase their ability to be professionally reaching out and take control over their customer communication through blogs, knowledge bases, and contact pages.

Bootstrap applied to the Home

Javascripts applied in the body sections.

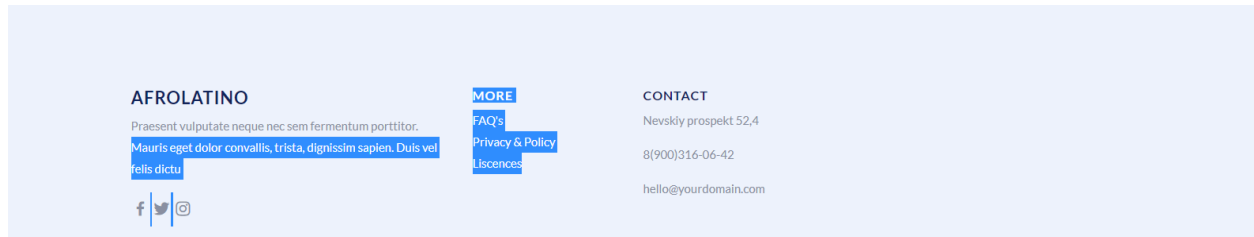

Form for interested candidates to apply for our agency.

The screenshot shows the Afrolatino website's contact form. The navigation bar is identical to the previous page. On the left, there is a photo of a modern interior with a wooden cabinet, a small table, and two white chairs. To the right of the photo, the heading 'GIVE US A BRIEF INFO ABOUT YOURSELF' is followed by three input fields: 'Your name..', 'write your number..', and 'tell us about yourself..'. A pink 'Submit' button is located below these fields. At the bottom right of the page, there is a small text area that says 'Activate Windows Go to Settings to activate Windows'.

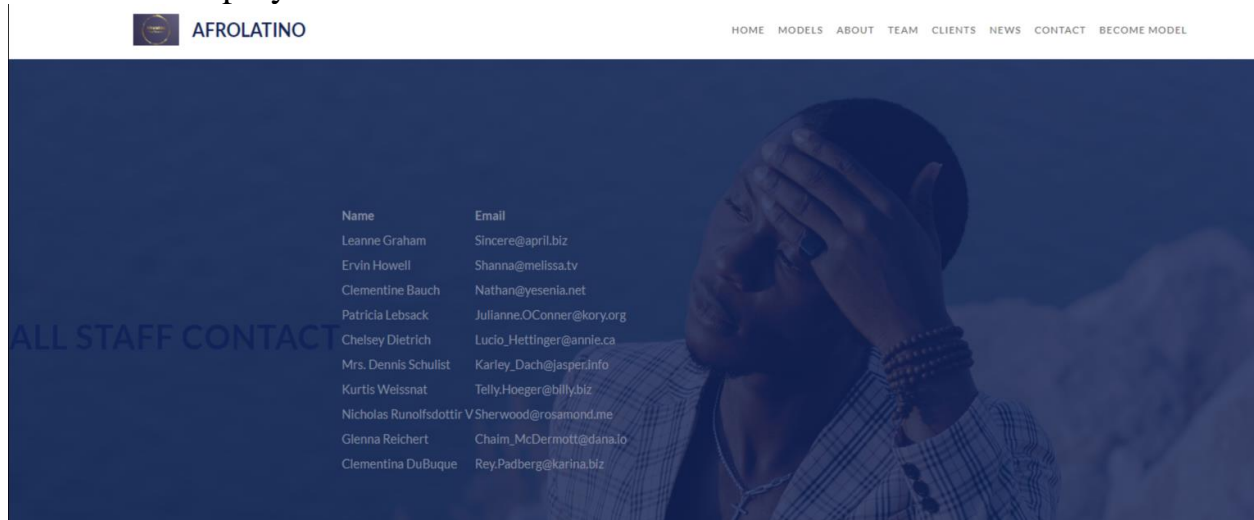

We provide a newsletter to be able to provide our subscribers with latest news.

The screenshot displays the Afrolatino website's newsletter subscription form. The navigation bar is the same. The section is titled 'NEWS' and 'SUBSCRIBE TO OUR NEWSLETTER'. Below the title is a placeholder text 'Lorem ipsum..'. The form consists of two input fields: 'Name' and 'Email address'. Below these fields is a checkbox labeled 'Daily Newsletter' which is checked. A pink 'Subscribe' button is at the bottom of the form.

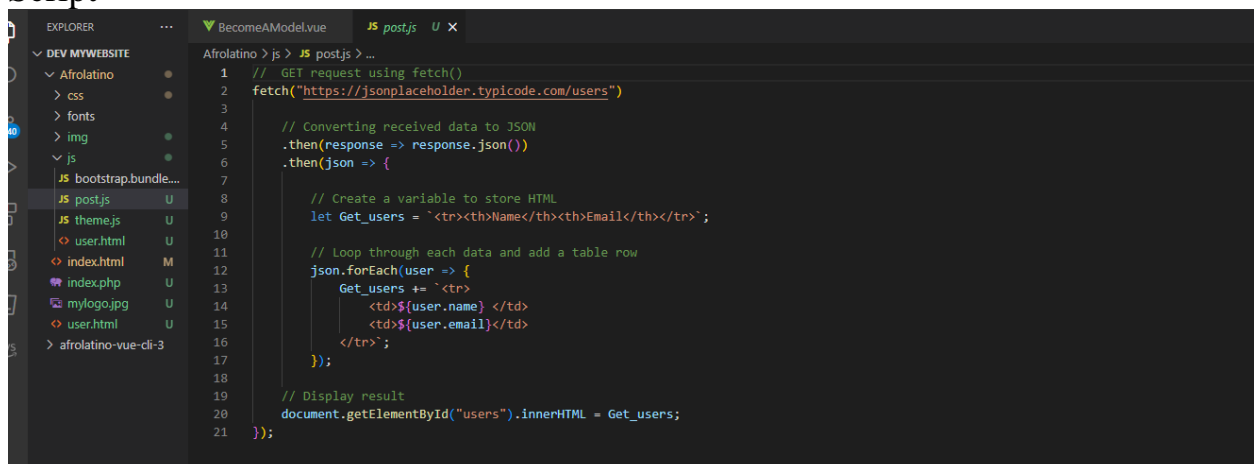

Our contact information to reach out as well.

In the second part of the work, we wrote an Api(fetch) that generate out contact info of our employees.

Вывод

In this laboratory work. I was able to use Bootstrap, a free and open-source CSS framework directed at responsive, mobile-first front-end web development. It contains HTML, CSS and JavaScript-based design templates for typography, forms, buttons, navigation. Secondly, I learn more about Api , to Get data from external sources using `fetch`.
